

Demonstration of Proposed Features

Date	15 JULY 2026
Team ID	
Project Name	AI-Based Credit Card Approval Prediction System
Maximum Marks	1Mark

Demonstration of Proposed Features:

S.No	Feature Name	Description	Status (Implemented/ Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Applicant Data Input	Collects applicant financial and demographic details through a user-friendly web interface.	Implemented	Yes	Successfully accepts user input for prediction.
2	Data Preprocessing	Cleans, encodes, and preprocesses applicant information before prediction.	Implemented	Yes	Handles categorical encoding and feature scaling.
3	Machine Learning Prediction	Predicts whether a credit card application will be Approved or Rejected using the trained model.	Implemented	Yes	Uses the best-performing classification model.
4	Multiple Model Comparison	Evaluates Logistic Regression, Decision Tree, Random Forest, and XGBoost models to determine the most accurate algorithm.	Implemented	Yes	Performance comparison completed using evaluation metrics.
5	Flask Web Application	Provides an interactive web interface for real-time credit card approval prediction.	Implemented	Yes	Successfully integrated with the trained model.
6	IBM Watson Cloud Deployment	Deploys the trained model on IBM Watson Machine Learning for scalable cloud-based prediction.	Implemented	Yes	Cloud deployment tested successfully.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100
