

Project Executable Files

Date	15 JULY 2026
Team ID	
Project Name	AI-Based Credit Card Approval Prediction System
Maximum Marks	3 Marks

Project Executable Files

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files	NA
5	Environment configuration file (.env.example)	NA
6	Deployed application URL	Yes
7	APK / Executable binary	NA
8	Docker file / Containerization config	NA
9	Test files and test results	NA
10	Demo video or walkthrough	Yes

Step 2: File / Folder Structure

Credit-Card-Skillwallet-Internship/

```

— templates/
— .gitignore
— README.md
— app.py
— data_collection.py
— data_preprocessing.py
— epic2_eda.py
— epic3_preprocessing.py
— epic4_model_building.py
— model_building.py
— save_model.py
— models.py
— processed_dataset.csv
— loan_approval.db
— model.pkl
— scaler.pkl
— requirements.txt
— requirements_dev.txt
— vercel.json
— get-pip.py
— (Generated Files)
  — application_record.csv
  — credit_record.csv
  — plots/
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	IBM Watson Machine Learning Deployment URL (<i>Paste URL</i>)
Login Credentials (Demo)	Username: demo Password: demo123 (<i>or NA</i>)
Platform / Hosting Provider	IBM Cloud – Watson Machine Learning
Repository Link	https://github.com/Bhuwinrag/Credit-Card-Skillwallet-Internship
Demo Video Link	

Step 4: Run Instructions

,step-by-step instructions for the evaluator to project locally:

Prerequisites

- Python 3.9 or later
- pip package manage

Installation

1. Clone the repository: git clone <https://github.com/Bhuwinrag/Credit-Card-Skillwallet-Internship.git>
2. Navigate into the project: cd Credit-Card-Skillwallet-Internship
3. Install dependencies: pip install -r requirements.txt
4. Run the Flask application: python app.py
5. Open the browser: <http://127.0.0.1:5000>
6. Enter applicant information.
7. Click **Predict**.
8. The system displays either
 - Approved
 - Rejected

based on the trained machine learning model.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround/ Status
1	Prediction depends on quality and completeness of applicant data.	Provide accurate financial details before prediction.
2	Model is trained on historical data and may not reflect future banking policy changes.	Retrain periodically with updated datasets.
3	Only binary approval prediction is provided; detailed rejection reasons are not generated.	Future enhancement: Explainable AI (SHAP/LIME) integration.
